

Do you experience tinnitus, headaches, insomnia, heart arrhythmias or short-term memory loss?

If so, you may be impacted by exposure to radiofrequency radiation from cell phones, cordless phones, Wi-Fi, cell phone towers, tablets, smart meters or wireless laptops and the extremely low frequencies from electricity. Dirty electricity, also is often a hidden culprit of health problems in our modern homes and offices. Research has shown that diabetes, multiple sclerosis, asthma, obesity and neurological disorders could be a result of electromagnetic frequencies in addition to other environmental toxins.

If you or your loved one suffers from chronic diseases such as

Diabetes Multiple sclerosis Asthma Neurological disorders AD/HD

We Can Help You!

The Center for Safer Wireless offers EMF Assessments

A staff member of the Center for Safer Wireless will come to your home or office and check radiofrequency radiation, alternating current (AC) magnetic fields, body voltage, and dirty electricity in your environment. We will recommend how you can reduce your exposure after the assessment is completed.

The assessment involves using various meters to determine the levels of extremely low frequency electromagnetic fields, radio frequency radiation, dirty electricity, and in the case of a home assessment, the use of a body voltage meter while you are on your bed to measure the voltage difference between your body and the ground. Body voltage can result from the influence of static electricity, e.g., when shuffling one's feet on the ground, or from AC electricity. There will be remediations suggested for any problems found. Recommendations are made, while going through the home with the meters, about where to place and how to use various devices more safely. Outlets and switches are checked with a milligauss meter to ensure the electromagnetic fields around them are safe. The microwave oven is checked for leaking seals. At the end of the assessment, all the measurements and recommendations are reviewed with you. If a high level of dirty electricity is present in the home, dirty electricity filters will be recommended and the number needed for a healthy environment will be determined.

EMF Assessment

\$230 for two hours and
\$115 for each additional
hour

•The cost of the assessment depends on the size of the home. During an assessment, we normally track our findings with handwritten notes. For the average home it typically takes 2 - 2.5 hours. The handwritten notes are mailed following the session. If you prefer a typed report with recommendations, it is available at an additional cost of \$150.00. A comprehensive typed report that lists assessment findings with our recommendations, and explains the science behind the recommendations, costs \$250.00 in addition to the assessment fee.

We are available to do the assessments in the local area. Travel of more than 20 miles round trip from our office in Arlington, VA will incur an additional fee of \$.50 per mile charge (over the 20 miles). Any parking fees or tolls will be charged to the client. There is an additional charge of \$20.00 per hour for weekends and holiday appointments.

Assessments can be done generally within the same week that you call. To arrange for an appointment please call us at 703-909-9936 or email info@centerforsaferwireless.us
