

Do you experience tinnitus, headaches, insomnia, heart arrhythmias or short-term memory loss?

If so, you may be impacted by exposure to radiofrequency radiation from cell phones, cordless phones, Wi-Fi, cell phone towers, tablets, smart meters or wireless laptops.

Do you or your loved one suffer from chronic diseases such as:

Diabetes Multiple sclerosis Asthma Neurological disorders

Do you know someone who has **Attention Deficit Disorder**? Radiofrequency radiation may play a role. If you are in an environment with excessive radiofrequency radiation or dirty electricity, your health can be affected.

We Can Help You!

The Center for Safer Wireless offers EMF Assessments

A staff member of the Center for Safer Wireless will come to your home or office and check radiofrequency radiation, alternating current (AC) magnetic fields, body voltage, and dirty electricity in your environment. We will do radiation measurements as well as recommend how you can reduce your exposure.

The assessment involves using various meters to determine the levels of extremely low frequency electromagnetic fields, radio frequency radiation, dirty electricity, and in the case of a home assessment, the use of a body voltage meter while you are on your bed to measure the voltage difference between your body and the ground. Body voltage can result from the influence of static electricity, e.g., when shuffling one's feet on the ground, or from AC electricity. If there is a problem, recommendations are made on how to correct it. While going through the home, as meter measurements are done, recommendations are made about how to use various devices more safely. Evaluations are done on the placement of anything electrical to ensure the electromagnetic fields are in the safe range. If it is not safe recommendations are made to remediate the situation. Outlets and switches are checked with a milligauss meter to ensure the electromagnetic fields around them are safe. The microwave oven is checked for leaking seals and the amount of radio frequency radiation emitted is measured. At the end of the assessment all of the measurements and recommendations are reviewed with you. If dirty electricity is present in the home filters will be recommended and the number needed for a healthy environment will be determined.

EMF Assessment

\$150 for two hours and \$75 for each additional hour

•The cost of the assessment depends on the size of the home. During an assessment, we normally track our findings with handwritten notes. For the average home it typically takes 2 - 2.5 hours. The handwritten notes are mailed following the session. If you prefer a typed report with recommendations, it is available at an additional cost of \$75.00 per hour. A comprehensive typed report that lists assessment findings with our recommendations, and explains the science behind the recommendations, costs \$180.00 in addition to the assessment fee.

We are available to do the assessments in the local area. Travel of more than 20 miles round trip from our office in Arlington, VA will incur an additional fee of \$.50 per mile charge (over the 20 miles). Any parking fees will be charged to the client. There is an additional charge of \$10.00 per hour for weekends and holiday appointments.

Assessments can be done generally within the same week that you call. To arrange for an appointment please call us at 703-909-9936 or email info@centerforsaferwireless.us

The Center for Safer Wireless (formerly Mom for Safe Wireless) is a 501 (c)(3) nonprofit organization that is dedicated to educating individuals about the potential health effects of wireless products. The organization was established in July 2009 in Gainesville, Virginia and gained 501(c)(3) status in September 2009.
