

Save a life and pass this on!

Volume 3 Edition 6

March 3, 2014

Your cell phone instructions tell you to keep the cell phone a certain distance (for the iPhone 5 it is 3/8 of an inch) away from your body. Unfortunately, many women don't read the instructions and carry their cell phones inside their bra on their skin. For some young women this act has resulted in breast cancer.

Although the doctors say there are not enough cases for a definitive cause and effect relationship, many factors, such as tumors in the shape of a cell phone, point to the cell phone being the cause of the cancer.

Dr. John West introduces this new phenomenon on the Dr. Oz show. [Click here for the Dr. Oz episode.](#) He has recently treated four women with breast cancer, 2 of which were 21 years old. In each instance the cancer was detected under the area where they regularly tucked their cell phone in their bras. The women had been doing this for several years up to 10 hours per day. Similar cases have been detected by other oncologists. Unfortunately, doctors have not routinely asked women, after they have been diagnosed with

breast cancer, if they placed their cell phones under their bra. As a result, we do not know if there is a larger population developing breast cancer from cell phones.

Almost every cell phone sold in the U.S. comes with a safety warning (hidden in the legal fine print that no one reads). The warning explains that using or carrying a phone directly against the body may expose the user to more radio frequency radiation than allowed by federal safety limits. The FCC guidelines on the safety of cell phones assume they would not be kept or used on the body. (Read about it here [Cell-phone Safety-What the FCC didn't test.](#))

Many people and even children carry their cell phone in their pockets which indicates that the warning is not seen or followed. The iPhone 5 instructions state: "To reduce exposure to RF energy, use a hands-free option, such as the built-in speakerphone, the supplied headphones or other similar accessories. Carry iPhone at least 10 mm away from your body to ensure exposure levels remain at or below the as-tested levels" [Click here for iPhone 5 instructions](#) The iPhone 4 instructions recommend 15 mm (5/8 of an inch) distance from your body.

The bottom line is that cell phones should be kept off the body. Cell phone manufacturers bury warning messages in cell phone manuals. Until more Senators, like Josh Green from Hawaii, push bills that would require health warning labels on the cell phones, the public will be subjected to health hazards that could possibly be prevented. [Read about the bill here.](#)

The Center for Safer Wireless continues to educate people about radio frequency radiation through its brochures, health exhibits, and meetings with prominent people who can influence the ongoing marketing of radiation emitting devices.

Please make a note of it.

From the Stop Smart Meters.org website:

TOM WHEELER- NEW FCC CHAIR GREETED WITH PROTESTS DURING VISIT TO BAY AREA

Tom Wheeler, chair of the Federal Communications Commission, and former head of the industry Wireless Association for 12 years, got an earful from protesters on Jan. 9 during his visit to the Bay Area. Organized by Stop Smart Meters! and the California Brain Tumor Association, protesters gathered and expressed their anger at the industry/government collusion that is failing to warn people about- or even acknowledge- the hazards of wireless technology. Wheeler's first speech in Silicon Valley was interrupted on five separate occasions by people pointing out the risks of inadequate RF human exposure guidelines. Dozens protested outside his speaking event in Oakland that evening, and activists raised awareness inside a San Francisco Verizon store that afternoon by placing health warning labels on cell phones on display.
