

The 5 ways DECT cordless phones function like cell phones

Volume 3 Edition 7

April 22, 2014

The 5 ways DECT cordless phones function like cell phones are:

1. They both emit radio frequency radiation (i.e., wireless radiation) even when not in use. They both use pulsed digital signals that 1000s of studies have shown to cause biological damage to our bodies.
2. They should be used on speaker phone or with an air tube headset when possible. Distance from the source helps to reduce the penetration of the wireless radiation.
3. Children should not use them. Many experts say their smaller bodies and dividing cells make them more vulnerable to the damage of wireless radiation.

4. The base of the phone functions like a cell tower antenna by constantly emitting wireless radiation throughout the house.

5. They are convenient but biologically disruptive to our bodies. They can cause many health problems including insomnia, headaches, tinnitus, heart arrhythmia, and the feeling of brain fog.

You can eliminate all of these health hazards by replacing the cordless phone with a corded phone. A long cord and extended coiled cord allows you mobility and you can place additional phones in rooms.

This is a worthwhile lifestyle change to ensure health and well being to yourself and family.
